

Bid Questions: Vecinos
April 12, 2024

1. Please provide additional section through and any more information details for the HPR-1 Lumicor and any hardware/track information. The information on A2 A-721 as well as the finish plan page is not enough to obtain a quote from Lumicor.
 - a. *Install with Suspended Wall, Single Section Partition System. See attached PDF for spec sheet.*
2. Do you know the width of each divider panel? I can't find it on the drawings.
 - a. *24" W (half width of a standard panel)*
3. Do you have the width of the Lumicor divider pieces? You listed a 96" panel, is this the height to the ceiling? Total width should be 24" (or half of a standard size panel).
 - a. *Ceiling height at that area is 96".*
4. Additional statement from the vendor:

It appears the Lumicor divider panel is 18"+/- wide. If the Track system as shown on the drawing is acceptable I would recommend using a wider width divider panel to create a more rigid panel. The White Mesh is 48" wide so each part could be 23"+/- if this is OK with the architect. The Track system is also less cost than the Freestanding Post.

 - a. *Yes, use the Track System (similar to the drawing) and plan for each part to be 23"+/-.*
5. Please clarify the low voltage scope. Low voltage is mentioned on the RCP and electrical drawings however, I cannot track down any symbols.
 - a. There is no voltage lighting in the project. In regards to low voltage data runs, infrastructure to be provided. IT cabling will be by owner.
